

Richard is a first-year **ARTS** student who needs help with selecting his courses

Richard finds out that he needs to use an application to get in a queue for an appointment

He joins the queue using the **WAIT-LESS** app which gives him the estimated wait time.

Richard can now use his time to study until he gets a notification on his phone

Richard's position has been updated and a pop-up notification appears

Richard can now start his advising session and could manage his time well.

A Program Advisor for the Faculty of **ARTS** advises Richard on what courses to take.
